Subject: HEODS Retirement and Private Queries

The HE Operational Data Store (HEODS) reporting environment will be retired at 7 a.m., June 3, 2013. The retirement corresponds with the splitting of the M-Pathways HE database into two systems – Student Administration (SA) and Human Resources Management (HRMS). Starting June 3, reports and queries will run in either the SA or HRMS production systems.

SYSTEM CHANGES
-- Public and private queries are being migrated to the production environments. However, accessing the queries requires you to know which database contains the query data. For example, to run queries related to student records or recruiting and admissions, log in to the SA database; to run queries related to timekeeping, payroll or human resources, log in to the HRMS database. If there are any problems migrating any of your private queries to the new databases, you will be contacted by ITS directly.

-- Your current security role determines if you will have access to the SA, HRMS or both databases after the retirement.

-- The splitting of the M-Pathways HE database into two new databases impacts your ability to create queries that include both Student Administration and Human Resources data. If you need to create a single report from data in both databases, several options will be available to you. Additional information on the options will be available prior to the HEODS retirement.

REQUIRED ACTION
-- Before May 20, 2013, review your private queries in HEODS and delete any queries you no longer need. Deleting unused queries prevents unnecessary data conversion during the M-Pathways database split.

QUESTIONS?
Information and updates on the HEODS retirement and M-Pathways database split project are available at: http://www.mais.umich.edu/hrms/hrsa-db-split.

If you have additional questions, please send an email to HEODSretirement@umich.edu.
